a
肾气丸的组成与主治如何随时代演变?
How did the composition and indications of Shenqi wan change over time?
Focus 肾气丸, 六味地黄丸 (Liuwei dihuang wan)
Forbidden 消渴 = 糖尿病 (xiaoke read as diabetes)
Tracks all five discovery tracks, D1–D5
Evidence verbatim quotations; ≥ 2 records from ≥ 2 independent source families
Gates G0–G6 pass on the current version; G4–G6 strict
Accept no open hard or critical objection; rival explanations addressed; expert review before publication
Stop after 2 rounds, or when new evidence adds < 5%
Digest 255a516498e9d093…, fixed before the first task
Scope 273 books, 1,620 passages naming a focus term (Qin–Han 22, Wei–Jin 13, Sui–Tang 16, Song–Jin–Yuan 211, Ming 708, Qing 648, Republic 2)

D1–D5: discovery tracks (a)
e
H1 · meets every machine criterion; waits for an expert
In indication claims, 淋 (strangury) with 烦躁 (restlessness) goes with 六味地黄丸: confidence 1.0, lift 9.7; one-sided Fisher exact P = 0.010, retained after Benjamini–Hochberg correction across 6 rules (q = 0.1).
脉因证治 (Qing, 1775) · jc_o043.01385
「…病則煩躁，小便濇，淋如膏油之狀……六味地黄丸主之」
医学集成 (Qing) · jc_o128.00164
「…其證必兼喘嗽煩躁，遺淋失血，治宜六味丸」
Two independent source families (G5 pass). Rival explanations: the same formula under another name, a single case and one passage copied are excluded; another formula under the same name stays open.
8 of 9 contract criteria met; only an expert may set G7.
H5 · six books, one source family
In indication claims, 多饮 (much drinking) with 小便多 (copious urine) goes with 肾气丸: confidence 1.0, lift 4.85; Fisher P = 1 × 10−5.
The 消渴 clause of the Jingui yaolüe (chapter 13)
「男子消渴，小便反多，以飲一斗，小便一斗，腎氣丸主之」
Witnesses: the Deng Zhen print and the Wu Qian manuscript, which lacks 小便一斗 (CMETA); 新编金匮要略方论 (Kanseki Repository); 脉经, two witnesses (JiCheng), which copies the clause; 医说 (1206), which cites Zhang Zhongjing for it.
Skeptic: transcription dependence and a single source. The claim was narrowed (one tradition, surveyed corpus) and a validator closed the objections; without its one family no support is left.
G5 warns: one independent family, two required.
R1 · falsified by later books
热 (heat) with 上气 (counterflow qi) is written before 960 and not after.
脉经, the illnesses of the foot shaoyin channel (JiCheng)
「…是主腎所生病者，口熱舌乾，咽腫上氣，嗌乾及痛…」
Counter-evidence: 针经节要 (Yuan, 1315) · jc_k009.00006
「…主腎所生病口熱舌乾咽腫上氣嗌干及痛…」
Critical objection: three later books, in three source families, state the link, so G6 fails and the hypothesis is rejected.
Both passages list 口熱 (a hot mouth) and 上氣 among the channel's illnesses, and the later one copies the canonical list: the rules read two findings of one list as an association (Supplementary Fig. 1).
