a
肾气丸的组成与主治如何随时代演变?
How did the composition and indications of Shenqi wan change over time?
Focus 肾气丸, 六味地黄丸 (Liuwei dihuang wan)
Forbidden 消渴 = 糖尿病 (xiaoke read as diabetes)
Tracks all five discovery tracks, D1–D5
Evidence verbatim quotations; ≥ 2 records from ≥ 2 independent source families
Gates G0–G6 pass on the current version; G4–G6 strict
Accept no open hard or critical objection; rival explanations addressed; expert review before publication
Stop after 2 rounds, or when new evidence adds < 5%
Digest 255a516498e9d093…, fixed before the first task
Scope 206 books, 1,399 passages naming a focus term (Qin–Han 51, Wei–Jin 15, Sui–Tang 23, Song–Jin–Yuan 293, Ming 624, Qing 392, Republic 1)

e
H1 · meets every machine criterion; waits for an expert
In indication claims, 烦躁 (restlessness) goes with 六味地黄丸: confidence 1.0, lift 5.1; one-sided Fisher exact P = 0.037, retained after Benjamini–Hochberg correction across 6 rules (q = 0.1).
医学集成 (Qing) · jc_o128.00164
「…其證必兼喘嗽煩躁，遺淋失血，治宜六味丸」
笔花医镜 (Qing, 1824) · jc_o003.00384
「煩躁發熱者。虛火亢也。六味地黃丸主之」
Two independent source families (G5 pass). Rival explanations: the same formula under another name, a single case and one passage copied are excluded; another formula under the same name stays open.
8 of 9 contract criteria met; only an expert may set G7.
H2 · five witnesses, one source family
肾气丸 with 心烦 (vexation) is written before 960 and not after; had the early rate persisted, finding no later instance would have P = 0.17.
The clause on 转胞 (retention of urine in women)
「煩熱不得臥，而反倚息……但利小便則愈，宜腎氣丸主之」
Witnesses: 新编金匮方论, Deng Zhen print (CMETA); 金匮要略方, Wu Qian manuscript (CMETA); 新编金匮要略方论 (Kanseki Repository); 脉经, two witnesses (JiCheng). The 脉经 copies the 金匮 clause.
Skeptic: transcription dependence, one source, absence not significant. The claim was narrowed (one tradition, surveyed corpus, exploratory) and a validator closed the three objections.
G5 warns: one independent family, two required.
R1 · falsified by a later book
理中丸 with 发热 (fever) is written before 960 and not after.
伤寒论, two Song-print witnesses (CMETA)
a cholera clause listing fever, headache and body pain, ending
「…寒多不用水者，理中丸主之」
Counter-evidence: 时方妙用 (Qing, 1803) · jc_d041.00588
「…則為發熱惡寒頭痛項強等症。宜九味羌活湯以散之。涼中於中。則為吐瀉腸痛。宜理中湯」
Critical objection: the link is restated after 960, so G6 fails and the hypothesis is rejected.
Neither passage gives 理中 for fever itself: the rules read co-occurrence as association (Supplementary Fig. 1).
